DETAILED ACTION

Drawings

1. The drawings filed on 03/10/2005 are acceptable subject to correction of the informalities on Fig.4, wherein an arrow without reference number pointing to a part of apparatus. In order to avoid abandonment of this application, correction is required in reply to the Office action. The correction will not be held in abeyance.

Allowance

2. The following is an examiner's statement of reasons for allowance: William C. Jones discloses (see Figs 1, 4 and claim 2) an apparatus for dusting plastic film and sheet material comprising two chambers and apparatus means for reducing the cling tendency of a plastic film. However, Jones does not disclose a second chamber comprising a dusting powder removal chamber and a static/drag test slide unit. Norheim (US 6,510,788) discloses (see Abstract and Fig 1) a device and a method for application of powder on a base sheet comprising a powder applying device and suction device. Herren et al (US 6,645,298) discloses (see Fig 13) a device for deacidification of printed matter with pulverized active substance comprising a dusting applying chamber (10) for applying an air-powder stream (through diffuser 15) and a dusting powder removal means (low-pressure 19b fan extracting powdered substance into collecting container 40). Strahm et al (US 6,425,344) discloses (see Fig 2) a device for coating a surface of a web (sheet) with a layer of plastic comprising a blow means (90 to apply powder a suction means (10) and electrodes (14) for breaking down static

charge of the powder. All cited powder application references including Jones, Norheim, Herren et al and Strahm et al do not disclose a static/drag test slide unit. JP-2000-310591 discloses (see English translated Abstract and Fig 5a) a static friction tester having a slider measuring the coefficient of static friction of wires under tension calculating the angle of inclination of the slider. However, JP'591 does not disclose a static/drag test slider unit measuring and recording passage time of the substrate. Markstrom (US 5,490,410) discloses (see Fig 1 and Abstract) a device for measuring the friction and the coefficient of friction of sheet-shaped materials, wherein a force is applied against to the test surface (sheet-shaped material). Prior art of record does not disclose or suggest a process and apparatus for preparation of no-jam vending machine cards by applying powder, wherein the process and apparatus comprise, among others, a static electricity/drag co-efficiency test slide unit with two electric eye measuring slide passage time and a recording means to record passage time of a test card passage time between the electric eye.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
